

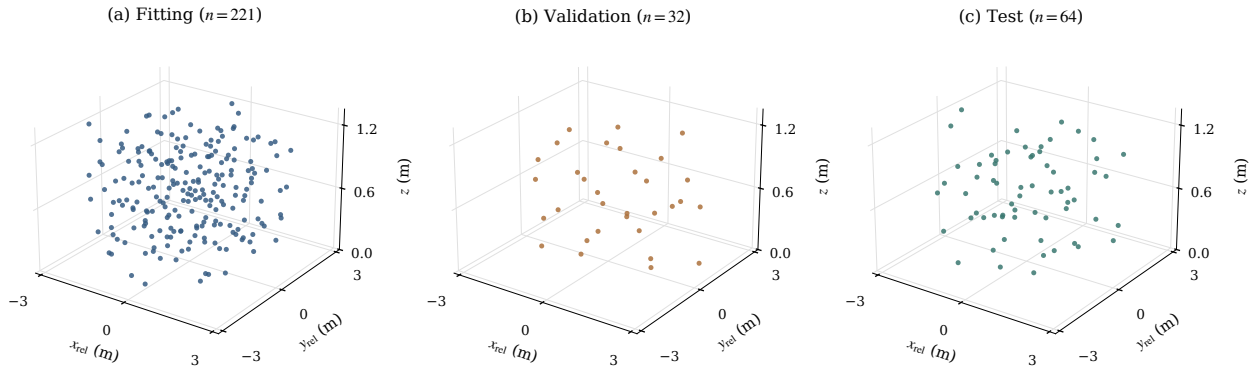

Figure 1: Target locations for the fitting, validation and test scenarios, expressed relative to the initial robot pose. The horizontal coordinates x_{rel} and y_{rel} point forward and left, respectively; z is world height. Each point represents one scenario. All panels use the same coordinate limits and viewpoint; the vertical scale is expanded for readability.

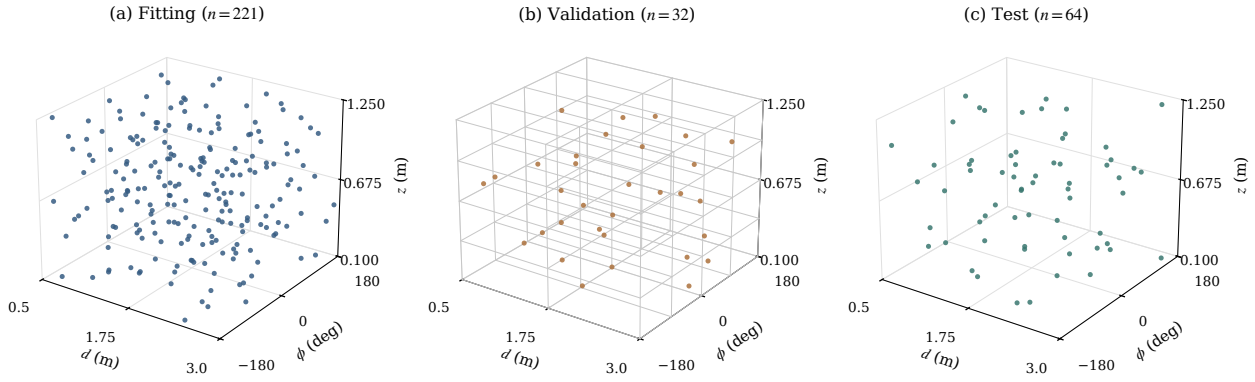

Figure 2: Scenario coverage in target distance d, relative azimuth ϕ and world height z. The lattice in panel (b) partitions the parameter space into $2 \times 4 \times 4 = 32$ strata, with one validation scenario per stratum. Azimuths $-180°$ and $180°$ denote the same direction. These views show three of the six sampled parameters.
