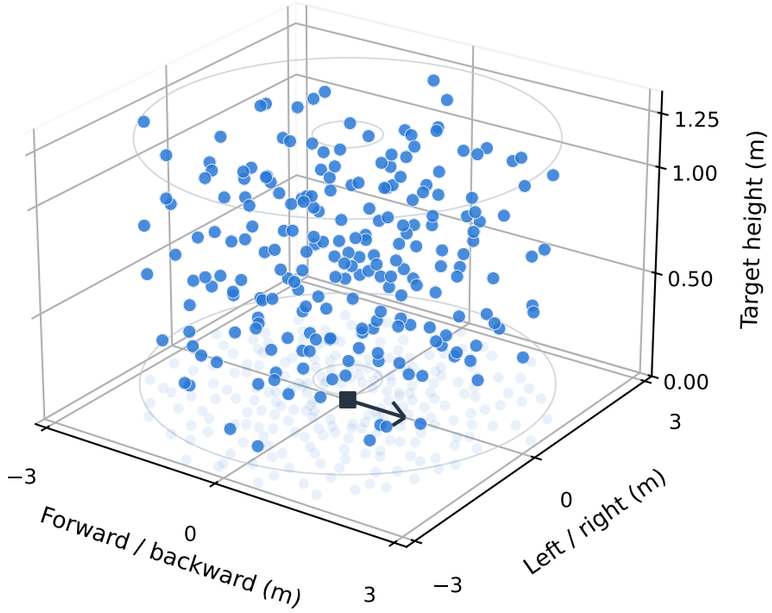
Where are the targets relative to the robot at the start?

Each point is one scenario; all panels use the same axes and viewing angle.

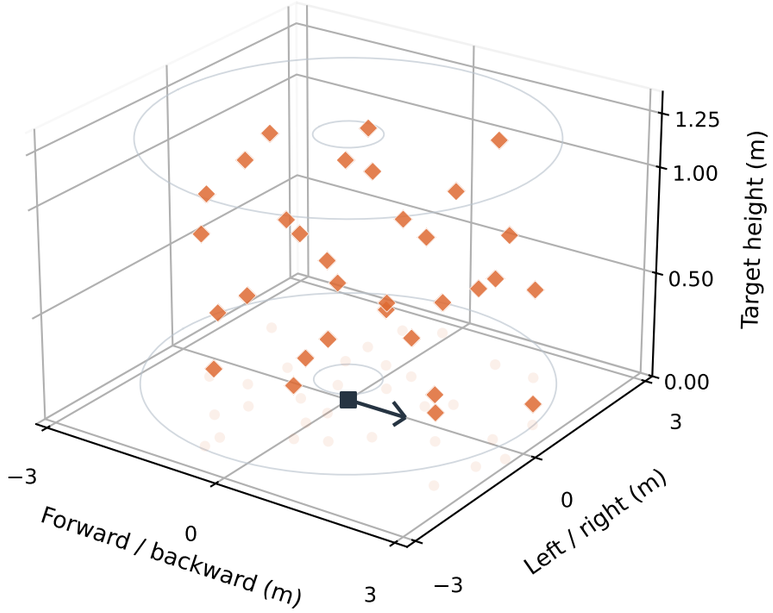
Fitting | n = 221

Used to learn the policy



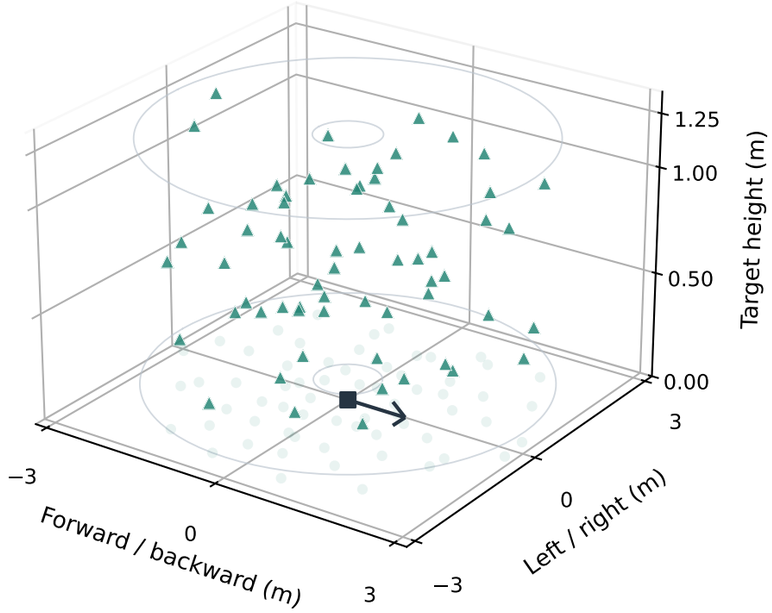
Validation | n = 32

One scene in each of 32 strata



Test | n = 64

Separate Sobol design



Robot = dark square at the origin; arrow = forward (+x). Faint dots are floor projections.
Height is in world coordinates; the vertical scale is expanded for readability.
